**INTRODUCTION**

The examiner acknowledges, as recommended in the MPEP, the applicant's submission of the amendment dated 9/12/07. At this point, claims 1, 3-4, 12, 15-16 have been amended, and claim 17 has been added. Thus claims 1-17 are pending in the instant application.

**DETAILED ACTION*****Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 15 is rejected under 35 U.S.C. 102(b) as being anticipated by Satake et al. (US 6,096,455).

**FIG. 10(d)**

Satake et al. disclose in fig. 10 (d), an electrode substrate (S) that is coated with an electrode material (A) containing an electrode active material and a binder to form electrodes, comprising: a conductive layer (B) made of a conductive material that is formed on at least one surface of an electrode current collector having through-holes that penetrate front and rear surfaces and at least part thereof is filled with the conductive material.

***Allowable Subject Matter***

3. Claims 1-14, 16, and 17 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest (in combination with the other claim limitations) an organic electrolyte capacitor wherein the positive and negative electrodes include the positive or negative electrode active material layer on an electrode substrate that has a conductive layer made of a conductive material on an electrode current collector, which has a through-hole that penetrates the front and rear surfaces and at least part thereof is filled with the conductive material, and the negative electrode electrochemically carries lithium ions (claims 1-14); and an electrical storage device wherein the positive and negative electrodes have conductive layers made of conductive materials on electrode current collectors having through-holes that penetrate the front and rear surfaces and at least part thereof is filled with the conductive materials, and have positive or negative electrode active material layer on the conductive layers (claim 16).

***Response to Arguments***

5. Applicant's arguments with respect to claim 15 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
